An agentic brain that builds itself.

Team0 architecture: how your company's work becomes one living picture, stays true, and reaches every agent in your company.

Follow Jordan's email down the middle: Kate's brain, the company brain, your Codex.

Sources

synced in the background · Gmail is read-only

Your sources

email · calendar · tools · meetings · agents

Jordan to Kate: "Can we move the pilot review to Thursday?"
email Tue 09:12 · her calendar moved it Tue 09:40

Ingest

connected sources, within your chosen access

Jordan's words and the calendar change
source preserved · date and speaker attached

Write path

claims, with sources and visible uncertainty

Pilot review moves to Thu 14:00
typed claim · calendar confirmed · said Tue 09:40

Connected work

Learn from the sources you choose.

- **Your sources** — Email, calendar, documents, tools and meeting notes.
- **Questions stay questions** — Asking about a claim does not make it true.
- **Credentials stay secret** — Credentials are not learned as facts.
- **Agent reports stay marked** — An agent saying it acted is not confirmation.
- **Sources remain traceable** — Keep the origin of what was learned.
- **Retention is controlled** — Your company chooses how long originals remain.

Learning checks

What is learned, connected and kept with its source.

- **Typed claims** — Keep what is claimed, about whom and when.
- **Names and identities** — Recognize the same person across sources or a new address.
- **People and senders** — Distinguish a person from a bot or notetaker.
- **Links with evidence** — Connect names only when the source supports the link.
- **People and companies** — Keep names, companies and the records they concern.
- **Your own words** — Sent-mail promises are yours: who answers and who does it.
- **Complete source context** — Read long meetings and documents in full.
- **Ambiguity checked** — Ask about claims that cannot be confirmed clearly.
- **Source-linked records** — Keep who said it, what it concerns and everyone named.
- **Credentials stay secret** — Credentials do not become learned facts.

Inside the World Model

one private brain per person, plus the company brain

records · are the circles · facts are the links and statements between them

- **Moments** — a meeting or chat, summarized in full
- **Storylines** — arcs across moments
- **Work things** — features, projects, releases, policies, topics
- **Company terms** — codenames like "Falcon", confirmed by you
- **Affected by a decision** — promises, plans, meetings, docs it puts at risk
- **Heard, then decided** — a coworker's newer decision updates it
- **Links, labelled** — from mail, meetings, chats, with what they are
- **Who owes whom** — every promise and ask names both sides
- **Changes** — every replacement, logged
- **Settlements** — what closed a promise
- **Meaning index** — search by meaning
- **Attention** — pins, dismissals, follow-ups
- **Duplicates** — suggested, you confirm
- **Open promises** — tracked until settled

Truth upkeep

12 checks for current, sourced understanding

- **Single values replaced** — a newer value takes over
- **Update check on save** — does this replace an older fact?
- **Plan changes** — judged right after saving
- **Contradictions caught** — two current values clash
- **Disagreements kept** — side by side; your agent asks you
- **Promise kept, settled** — linked to what closed it
- **Calendar moves settle asks** — the calendar is the record
- **Corrections propagate** — everything built on it updates
- **Settlement fence** — closed stays closed
- **Relationships · 2 vendors** — a second model confirms
- **Nightly truth check** — re-judged with full context
- **Heard items end on their date** — or when replaced · never on age alone

~~Fri 11:00~~ → **Thu 14:00** — a newer value takes over

the calendar moved it Tue 09:40 · the old value stays in history

Keeps understanding current

Changes stay connected to the work they affect.

- **Revisit changed context** — Check understanding against newer evidence.
- **Moments and storylines** — Connect meetings and conversations over time.
- **Search by meaning** — Find relevant facts beyond exact words.
- **What matters** — Keep important people and work in view.
- **Possible duplicates** — Suggest ambiguous matches for your review.
- **A current overview** — Bring the relevant picture together when used.
- **Quality checks** — Evaluate answers as the system changes.
- **Recovery** — Keep recovery and backup controls in the install.

Sharing with the company

each person decides · off by default · nobody reads your brain

- **Off until you choose** — a company default only after notice
- **Work facts only** — labelled when saved · unsure stays private
- **Company mail only** — from the company's own mail domains
- **Your name on it** — "shared by Kate" · unconfirmed stays marked
- **Withdraw any time** — withdraw the fact and what was built on it
- **Quotes stay home** — the fact crosses, never the evidence
- **May every coworker see it?** — pay, health, reviews, hiring stay home
- **Messages you send** — are yours, like an email · not checked
- **Coworkers' agents** — may message yours only if you switch it on
- **Their words stay theirs** — never saved as yours · stop it per agent
- **Your brain stays yours** — not the admin, not coworkers
- **When someone leaves** — shared work stays · private brain erased

Kate shares her work facts with the company
her choice · her name goes with it · private stays home

Company brain

flows into every brain that knows Northpeak

The company brain

a full brain of its own: its sources, shared facts, the same truth checks

- **Its own sources** — shared inbox, calendar, CRM, docs
- **Shared work facts** — each one names who shared it
- **Flows down ahead of time** — to every brain that knows the client, read-only
- **Fills your gaps** — labelled "from the company brain"
- **Who knows what** — "Kate was last in touch with Northpeak"
- **Ask a coworker's brain** — if they allow it · nothing kept · they see it
- **Customer decisions** — reach only people who know that customer
- **Asked directly** — same rule: only people who know that customer
- **Company mail domains** — domains recognized for the company
- **An admin's No stands** — and withdraws exactly that domain's copies
- **Company read, per agent** — on when you connect · switch it off per agent
- **Invite-only** — admins invite by email, pause anyone at once

Inside every fact

nothing is overwritten

Statement	who or what, and what is true	`trusted`	confirmed
Records	everyone and everything it concerns	`candidate`	heard
Date	the day it's about	`evidence`	receipts
Said	when it was said	`dormant`	not current
Learned	when Team0 learned it		
Source	the exact line, or "shared by Kate"		
History	replaced, never erased		
Correction	yours always wins		

three clocks on every fact

In every read
each fact shows who said it, when, which source, and how sure

What the brain can't decide, it asks you
two values disagree · same thing? · a promise at risk · whose promise

A newer value replaces the old one
a new employer ends the old link · the old one stays as history

Every fact links to its source; agents open it
Email, calendar, meeting, work tool or document

Answers lead with who said it
"Jordan said: … (shared by Kate)" · a replaced value shows as "earlier: …"

"When is the pilot review with Jordan?"
your Codex asks · Northpeak is already in your brain

Read path

one read, shaped by the request

Context for the question

Relevant, permissioned evidence for the agent's task.

- **People and projects** — Resolve the subject, or say there is no record.
- **Briefings and topics** — Bring together the context the question needs.
- **Current understanding** — Distinguish current, settled and contested claims.
- **Evidence you can open** — Follow a fact back to its source.
- **Company context** — Fill permitted gaps from the company brain.
- **Across languages** — Support questions across languages and scripts.
- **Reported actions** — Keep agent-reported completion unconfirmed.
- **Open commitments** — Bring the links and facts needed to follow through.
- **Questions for you** — Surface ambiguity you can resolve.
- **As of a date** — Answer what was true then, as well as now.
- **Contractor boundaries** — Limit reads to the sources they participated in.
- **Scope per agent** — Respect personal and company access grants.

agents write back · same door

Thu 14:00 · confirmed · shared by Kate
packet · scoped to Codex

Governed door

every read and write passes here

Governed door

sign-in, grant, limits, receipts, stop

request → sign in → grant → limits → privacy → receipt → packet

- **Sign in** — OAuth or per-agent key
- **Grant** — scope per agent · company read only if granted
- **Tools** — read · write back · message your own agents
- **Limits** — deduplicated, rate limited
- **Privacy** — encrypted intake
- **Receipts** — what it asked, what it got

Stop control: stop saving, or stop all access, per agent, any time

"Thursday at 14:00, confirmed. Kate shared it with the company."
Codex answers

Every agent

Claude Code · Codex · any MCP agent

Every agent

each sees only what you allow
Every turn · plugin reads before, saves after

Claude Code · Codex

On demand · MCP + standing instructions · what they relay is kept as heard

Any agent that connects over MCP · standing instructions tell it when to read

- **They talk to each other** — your agents message each other, and a coworker's too, if they allow it
- **They take your meeting notes** — a notetaker named after the agent you pick feeds meetings straight to your brain

Your console

Brain · Agent reads · Setup · Company

Fix a fact once and every agent gets the fix
pause a source · never-learn rules · the exact text each agent got

What is kept, and for how long

learned facts stay · the originals around them are kept as long as the company chooses, 90 days by default

Installed for your company. Maintained by Team0.

- **Updates and support** — A maintained product installed in your cloud.
- **Visibility** — Inspect usage, costs and answer quality.
- **Your provider accounts** — Use your company's supported model providers.
- **Company control** — Control sources, access and infrastructure.

Every agent in your company, in the know.

Runs in your company's own cloud, or on a server of its own in ours · invite-only · we keep it running
